

Evelyn

Minimal Startup/Business Theme

Things Used:

- Bootstrap
- Font Awesome
- Hover.css
- jQuery

HTML Sections:

- <head> contains the title of the page along with the meta tags and CSS files of the theme and other third party projects. It also contains pre-loader and style switcher.
- Style Switcher is a floating widget at the right end of the screen. It has been put there for demonstration of multiple colours of the theme.
- Preloader is a basic loading screen that is shown until your website loads for the user.
- There's also the navigation bar of the template. It sticks at the top and scrolls along.
- The homepage contains a welcome mat which can be modified to meet the end needs.
- You can also put your customer feedback at the testimonials part which occurs at the end of the homepage.
- You can write more about your business and your features in the homepage. Ample elements have been put and designed for the purpose.

Removing Fixed Position of Navigation Bar:

```
<div class="navbar navbar-default navbar-fixed-top">  
<div class="container">
```

This is pretty simple. To achieve this, all you need is to remove the class from *navbar-fixed-top* from the navigation bar element.

Removing Preloader:

```
<div class="preloader show">  
<div class="icon"></div>  
</div>
```

This is fairly simple, all you need is to remove the code shown above and the preloader would not be shown. You can also simply remove the *show* class from the element to hide it without altering the code.

Removing Style Switcher:

```
<div class="style-switcher">  
  
<div class="vis-widget">  
<i class="fa fa-paint-brush"></i>  
</div>  
  
<div class="hid-widget">  
  
<h3>Change Colour</h3>  
  
<div class="row colour-palette">  
  
<div class="col-xs-3 padding-5px">  
<div id="purple" class="colour-box"></div>  
</div>  
  
<div class="col-xs-3 padding-5px">  
<div id="pink" class="colour-box"></div>  
</div>  
  
<div class="col-xs-3 padding-5px">  
<div id="lightpink" class="colour-box"></div>  
</div>  
  
</div>  
</div>  
</div>
```

It's highly recommended that you remove the style switcher in the production mode. To remove the style switcher, you need to remove the that I've shown above. Another quick way to do this would be adding *hidden* class along with the *style-switcher* class above.

Contact:

If you encounter any problem while using the theme, I'd be happy to help you. Please do not hesitate to contact me.
